

1. Tosses of a biased coin

Problem 1. Tosses of a biased coin

7/7 points (graded)

Consider 10 independent tosses of a biased coin with the probability of Heads at each toss equal to p , where $0 < p < 1$.

1. Let A be the event that there are 6 Heads in the first 8 tosses. Let B be the event that the 9th toss results in Heads.

Find $P(B | A)$ and express it in terms of p using standard notation. (You can click on the "STANDARD NOTATION" button below.)

p

✓ Answer: p

p

2. Find the probability that there are 3 Heads in the first 4 tosses and 2 Heads in the last 3 tosses. Express your answer in terms of p using standard notation. Remember not to use ! or combinations in your answer.

$12 \cdot p^5 \cdot (1-p)^2$

✓ Answer: $12 \cdot p^5 \cdot (1-p)^2$

$12 \cdot p^5 \cdot (1 - p)^2$

3. Given that there were 4 Heads in the first 7 tosses, find the probability that the 2nd Heads occurred at the 4th toss. Give a numerical answer.

$9/35$

✓ Answer: $9/35$

4. We are interested in calculating the probability that there are 5 Heads in the first 6 tosses and 3 Heads in the last 5 tosses. Give the exact numerical values of a , b , c , d that would match the answer $ap^7(1-p)^3 + bp^c(1-p)^d$.

$a =$ 30

✓ Answer: 30

$b =$ 4

✓ Answer: 4

$c =$

8

✓ Answer: 8

$d =$

2

✓ Answer: 2

STANDARD NOTATION

Solution:

1. Event A refers to the first 8 tosses and event B refers to the 9th toss. Since tosses are independent, the 9th toss is independent of the first 8 tosses, and so events A and B are independent. Thus, $\mathbf{P}(B \mid A) = \mathbf{P}(B) = p$.
2. Let C be the event "3 Heads in the first 4 tosses" and let D be the event "2 Heads in the last 3 tosses". Since there is no overlap in the tosses involved in events C and D , these two events are independent. Therefore,

$$\begin{aligned}\mathbf{P}(C \cap D) &= \mathbf{P}(C)\mathbf{P}(D) \\ &= \binom{4}{3}p^3(1-p) \cdot \binom{3}{2}p^2(1-p) \\ &= 12p^5(1-p)^2.\end{aligned}$$

3. Let E be the event "4 Heads in the first 7 tosses" and let F be the event "2nd Heads occurred on the 4th toss". We are asked to find $\mathbf{P}(F \mid E) = \mathbf{P}(F \cap E)/\mathbf{P}(E)$.

The event $F \cap E$ occurs if there is 1 Heads in the first 3 tosses, Heads on the 4th toss, and 2 Heads in the next 3 tosses. Thus, we have

$$\begin{aligned}\mathbf{P}(F \mid E) &= \frac{\mathbf{P}(F \cap E)}{\mathbf{P}(E)} \\ &= \frac{\binom{3}{1}p(1-p)^2 \cdot p \cdot \binom{3}{2}p^2(1-p)}{\binom{7}{4}p^4(1-p)^3} \\ &= \frac{\binom{3}{1} \cdot 1 \cdot \binom{3}{2}}{\binom{7}{4}} \\ &= \frac{9}{35}.\end{aligned}$$

Alternatively, we can solve this problem by counting. We are given that 4 Heads occurred in the first 7 tosses. Each sequence of 7 tosses with 4 Heads is equally likely, and so the discrete uniform probability law can be used here. There are $\binom{7}{4}$ elements in E . For the event $E \cap F$, there are $\binom{3}{1}$ ways to arrange 1 Heads in the first 3 tosses, 1 way to arrange the 2nd Heads in the 4th toss, and $\binom{3}{2}$ ways to arrange 2 Heads in the next 3 tosses. Therefore,

$$\mathbf{P}(F \mid E) = \frac{\binom{3}{1} \cdot 1 \cdot \binom{3}{2}}{\binom{7}{4}} = \frac{9}{35}.$$

4. Let \mathbf{G} be the event "5 Heads in the first 6 tosses" and let \mathbf{H} be the event "3 Heads in the last 5 tosses". These two events are not independent as there is some overlap in the tosses, namely, the 6th toss. To compute the probability of interest, we partition the set $\mathbf{G} \cap \mathbf{H}$ into two (disjoint) subsets by considering separately the two possible results of the 6th toss:

$$\begin{aligned} \mathbf{G} \cap \mathbf{H} = & \{4 \text{ Heads in tosses 1-5, 6th toss is Heads, 2 Heads in tosses 7-10}\} \\ & \cup \{5 \text{ Heads in tosses 1-5, 6th toss is Tails, 3 Heads in tosses 7-10}\}. \end{aligned}$$

Therefore,

$$\begin{aligned} \mathbf{P}(\mathbf{G} \cap \mathbf{H}) &= \binom{5}{4} p^4 (1-p)^1 \cdot p \cdot \binom{2}{0} (1-p)^2 \cdot \binom{4}{2} p^2 (1-p)^2 \\ &\quad + \binom{5}{5} p^5 \cdot (1-p) \cdot \binom{4}{3} p^3 (1-p) \\ &= 30p^7 (1-p)^5 + 4p^8 (1-p)^2. \end{aligned}$$
