

8. Exercise: LLMS drill

Exercise: LLMS drill

2/2 points (graded)

Suppose that Θ and W are independent, both with variance 1 , and that $X = \Theta + W$. Furthermore, $\mathbf{E}[\Theta] = 1$ and $\mathbf{E}[W] = 2$. The LLMS estimator $\hat{\Theta} = aX + b$ has

$a =$ ✓ Answer: 0.5

$b =$ ✓ Answer: -0.5

Hint: Remember the formula $\mathbf{Cov}(X + Y, Z) = \mathbf{Cov}(X, Z) + \mathbf{Cov}(Y, Z)$.

Solution:

We have $\mathbf{E}[X] = \mathbf{E}[\Theta] + \mathbf{E}[W] = 3$ and $\mathbf{Var}(X) = \mathbf{Var}(\Theta) + \mathbf{Var}(W) = 2$. Also,

$$\mathbf{Cov}(X, \Theta) = \mathbf{Cov}(\Theta, \Theta) + \mathbf{Cov}(\Theta, W) = \mathbf{Var}(\Theta) + 0 = 1.$$

Therefore, the LLMS estimator is

$$\hat{\Theta} = 1 + \frac{1}{2}(X - 3) = \frac{1}{2}X - \frac{1}{2}.$$
